

Carbon Monoxide Alarm SafeMi SHC-07

The SafeMi SHC-07 sensor is a high-class carbon monoxide (carbon monoxide) sensor, which is equipped with the highest-quality electrochemical sensor, allowing the detection of even trace amounts of carbon monoxide in the air. Thanks to the use of modern solutions, the SafeMi SHC-07 sensor enables the detection of hazards at a very early stage. The device is powered by two AA batteries (included) and will automatically inform us about the need to replace them. By using a SafeMi carbon monoxide detector, we have a safety guarantee, which is ensured by a loud audible alarm and optical signaling. The large, easy-to-read display makes it possible to read the currently detected concentration of carbon monoxide and the maximum historical indications. The high quality of the device is confirmed by the certificate of compliance with the EN50291 standard. Ease of installation and small size make this sensor ideal for use in residential houses as well as caravans, motorhomes or yachts. The device has a 7-year warranty and a 10-year service life.

TECHNICAL DATA:

Model	SafeMi SHC-07
Power	2 x AAA batteries (included)
Detects	Carbon Monoxide
Service life	10 years
Warranty	7 years
Certificates	EN50291
Package	12 x 12 x 5 cm (10 pieces in a collective packaging)
Dimensions	10 x 2,5 cm (diameter x depth)
EAN code	5903714407316
